

Every month, City Theatrical creates dozens of [custom manufacturing](#) projects for customers all over the world. These projects include entertainment lighting, architectural lighting, and OEM development projects for other companies. Custom projects give us a chance to use all of our experience, knowledge, and capabilities.

For [Crazy For You London](#), the lighting designer Ken Billington required custom Top Hats to provide beam control for GLP FUSION X-PAR 12 Z fixtures. We custom manufactured the Top Hats in our Carlstadt, New Jersey factory using steel to meet the size specifications to fit the fixture and provide a durable beam control solution that would last.

“The [GLP Fusion X-PAR 12Z](#) fixture was new to the inventory of PRG UK. It is a good light for the needs of the *Crazy for You* London show, but I was worried about light spill on several painted drops that were hanging just upstage of the electric pipes. A City Theatrical Top Hat was the perfect answer, but with an odd size frame holder, it was necessary to have them custom made. A fixture was delivered to the City Theatrical shop and this custom GLP Fusion X-PAR 12Z Top Hat was born. Since City Theatrical was created in 1986, they have been building all sorts of custom pieces for me and are a great asset to have in my design toolkit.”
